                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                              The invention relates to the diagnosis and management of infections by chlamydia species. The invention provides a composition that comprises at least two agents, where each of the agents is effective against a different phase of the chlamydial life cycle. The agents are selected from: (a) agents targetted against clementary body phase of chlamydial life cycle; (b) agents targetted against replicating phase of chlamydial life cycle; (c) agents targetted against replicating phase of chlamydial life cycle; (d) agents targetted against replicating phase of chlamydial life cycle; (d) probenicid, and (e) antiporphyric acid. The composition as used to elicit a protective immune response to Chlamydial infection in an animal or human and is applied until the animal or human tests negative for chlamydia infection. It is also used to treat biological material infected with Chlamydia. Diagnostic kits for antibody assays against recombinant major outer membrane protein (MOMP), and for DNA amplification assays for chlamydial genes, are used to diagnose disease, ceg, autoimmune disease, an inflammatory disease or a disease that occurs in an immuno-compromised individual, associated with Chlamydia and annual and an inflammatory bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample when are also used to detect chlamydial elementary bodies in a sample with character and a season and an and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                sample. They are also used to monitor and/or modify the course of therapy in a patient. The treatment reduces the acellular load of infectious Ebstein Barr virus. The method is also used to treat porphyria, by reducing the number of elementary bodies and applying a drug, e.g. cimetidine, and antioxidants, to reduce the adverse effects associated with porphyria. Sequences AAW95320 to AAW95323 represent constant and variable domain sequences of various Chlamydia species.

The proteins given represent the signal peptide and an N-terminal fragment of a secreted protein. The nucleic acid sequences can be used for producing secreted human gene products. They can also be used to develop products for diagnosis and therapy. The proteins obtained may have cytokine activity, cell proliferation/differentiation activity, haematopolesis regulating activity, tissue growth regulating activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, tumour inhibition activity or other activity, the products
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    can be used in forensic, gene therapy and chromosome mapping procedures. The sequences can also be used for obtaining corresponding promoter sequences. The nucleic acids encoding the signal peptide can be used for directing extracellular secretion of a polypeptide or the insertion of a polypeptide into a membrane, or importing a polypeptide into a cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                                                                                                                                                      New nucleic acids encoding human secreted proteins - obtained from cDNA libraries prepared from e.g. liver, ovary, brain, prostate, kidney, lung, umbilical cord, placenta and colon tissue

                                                                                                                                                                                                            human secreted proteins encoded by the genes AAC68081-C68127. The genes and proteins are useful for preventing, ameliorating or treating medical conditions, e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer, and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus. Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative collitis; (c) cardiovascular disorders such as myocardial ischaemias;
                                                                                                                  Nucleic acids encoding human secreted proteins, used to treat, prevent, ameliorate or diagnose conditions such as cancer, and autoimmune diseases e.g. arthritis -

This invention describes a novel method to manufacture a preparation of an active substance, where the active substance is surrounded by at least one layer consisting of a protein that is cross-linked by an enzyme chosen from the group of lipoxygenase, protein disulfide isomerase, phenol oxidase and peroxidase, lysyl oxidase, protein disulfide reductase, tyrosine oxidase or sulfhydryl oxidases. Enzymes chosen from lipoxygenase, protein disulfide isomerase, phenol oxidase consulfhydryl oxidases, especially lysyl oxidase are useful for formulation of preparations of active substances. The method of the invention is used for manufacturing preparations of active substances. The preparations are useful as food additives or fodder or as pharmaceuticals. AAY51951-Y51962 represent fragments of the Pichla for manufacturing preparations or sulfacture the method of the consultations or consultation is a pharmaceuticals. AAY51951-Y51962 represent fragments of the pichla for manufacturing preparations or sulfacture the method of the consultation of the pichla consultations.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Lysyl oxidase; lipoxygenase; protein disulfide isomerase; phenol oxidase; peroxidase; protein disulfide reductase; tyrosine oxidase; food;
Manufacture of active preparations comprises cross linking a protein, which surrounds the active substance with an enzyme, especially a novel lysyl oxidase from Pichia pastoris \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This invention describes a novel method where an enzyme (I) selected from lipoxygenases, protein disulfide isomerases, phenol oxidases and

AAY64651 to AAX1052. The 5' ESTS can be used for producing secreted human gene products. The 5' ESTS can be used for producing secreted human gene products. They can be used for producing secreted human gene products. They can be used to identify and isolate 5' untranslated regions (UTRS) and upstream regulatory regions which control the location, development stage, rate, and quantity of protein synthesis, as well as stability of mRNA. The ESTs are also useful as probes for chromosome mapping, and to obtain full length cDNA clones. The ESTs can also be used in forensic procedures to identify individuals, or in also be used in forensic procedures to identify individuals, or in gene therapy protocols. The nucleic acids encoding signal peptides can be used for directing extracellular secretion of a polypeptide or the
peroxidases, lysyl oxidases, protein disulfide reductases, tyrosine oxidases or sulfilydryl oxidases is used to formulate compositions containing active ingredients. (I) is useful for crosslinking protein layers surrounding active ingredients in food, animal feed and pharmaceutical products. The compositions can be formulated without using chemical crosslinking agents. AAY51963-Y51974 represent fragments of the Pichia pastoris lysyl oxidase protein which is used to illustrate the method of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      procedures

The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
insertion of a polypeptide into a membrane, or importing a polypeptide into a cell. The proteins encoded by the EST sequences may be useful in treating a variety of human conditions. Secreted proteins have therapeutic value, and the identification of new secreted proteins is valuable. AAZ42249 to AAZ42264 and AAX64644 to AAX64650 represent sequences used in the exemplification of the present invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Peptide #3305 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 \ensuremath{\mathsf{Human}} genome-derived single exon nucleic acid probes useful for analyzing gene expression in human cervical epithelial cells -

The present invention relates to novel single exon nucleic acid probes (see AAI00010-AAI10067). The present sequence is a peptide encoded by one such probe. The probes are useful for measuring human gene expression in a human breast sample, where the probe hybridises at high stringency to a nucleic acid expressed in the human breast. The probes are useful for predicting, diagnosting, grading, staging, monitoring and prognosing diseases of the human breast, particularly those diseases with polygenic actiology. The diseases include: breast cancer, disorders of development, inflammatory diseases of the breast, fibrocystic changes, proliferative breast disease and non-carcinoma tumours.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO
                                                                                          Probe; human; breast disease; breast cancer; development disorder; inflammatory disease; proliferative breast disease; non-carcinoma tumour.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel single exon nucleic acid probe used to measuring gene expression
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Adenovirus; RGD sequence; adenoviral vector; capsid protein; ligand;

The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of
                                                                                                                                                                                                                                                                                           Peptide #3392 encoded by probe for measuring placental gene expression.

                                                                                                                                                                                                                                                   The present invention describes an adenoviral capsid protein comprising a heterologous ligand, where the ligand facilitates binding of the adenovirats to a target cell. The adenoviral vector is used to transfer a transgene to a target cell. The heterologous ligand in the adenoviral capsid protein (especially a fibre or hexon protein or protein IX) adenoviral vector can be used to transfer the human cystic fibrosis transmembrane conductance regulator protein gene to the respiratory epithelium of test animals. The modified adenoviral capsid proteins improve and/or alter the infectious capability of the vector. The

This invention describes a novel isolated polypeptide (I) comprising an amino acid sequence at least 95 % identical to a polypeptide sequences selected from 49 polypeptides encoded by polyuaclectide sequences included in American Type Culture Collection (ATCC) deposit number (C) included in American Type Culture Collection (ATCC) deposit number (C) the condition and in the specification. The products of the invention have (C) transitional cory, neuroprotective, antidiabetic, antiarthritic, antiarthritic, antiarthritic, antiarthritic, antiarthritic, antidiabetic, cardiant and antidiantacterial, antibsociatic, antidiabetic, candition and for diagnosing a pathological condition or susceptibility (C) antitheumatic, cardiant and anti-HIV activity. (I) or a mucled caid (II) concidition and for diagnosing a pathological condition or susceptibility or the condition. (I) is useful for preventing a disease, disorder or condition affects the activity of the polypeptide and for identifying an activity of in bological sample. (I), (II) or an antibody (IV) specific coil (I) is also useful for treating or preventing a disease, disorder or condition associated with aberrant expression of (I). Diseases treated or diagnosed include immune disorders, such as autoimmune diseases, blood protein associated with aberrant expression of (I). Diseases treated or disponders, anemia, allergic reactions and conditions such as arterioarterial cittude, arrhythmias, arteriosclerosis, coronary thrombosis, organ rejection or graft-versus-host disorders cardiovascular disorders such as arterioarterial figural diseases used associated with increased approsis that include acquired immunodeficiency syndrome (AIDS), corpusis that include acquired immunodeficiency syndrome (AIDS), corpusis that include acquired immunodeficiency syndrome (AIDS), corpusing deto sometic plastic sugery, to treat fibrosis, reperfusion injury or systemic cytokine damage, to stimulate chondrocyte growth, to prevent skin aging due to sunburn, to change a mammal, and produce 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ï

                                                                                                                                                                                                                                                                                                                                                                                    This invention relates to peptides AAB51512 - AAB51537 which represent conserved proteobacterial extracellular domains. Sequences AAB51518 tepresent peptides homologous to YadA, a yersinia adhesin which is an important virulence determinant of the Yersinia species. The invention includes an antibody which binds to the proteobacterial extracellular peptides, and an immunogenic composition containing the antibody used as a vaccine to prevent infection by a proteobacteria. The polypeptides and antibodies are useful in the treatment and prevention of proteobacterial infections. The polypeptides and antibodies are useful in the treatment and prevention of proteobacterial infections. The polypeptides can also be used to identify compounds which antagonize the binding of a bacterial adhesion to its ligand. The host cell can be used to produce the polypeptides in a suitable culture system. The composition can be used to vaccinate a patient against a proteobacterial infection.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Secreted protein; human; protein therapy; gene therapy; blood disorder; pathological condition; diagnosis; cancer; neurological disorder; developmental abnormality; foetal deficiency; leukaemia; hepatic disease; immune system disorder; Alzheimer's disease; cognitive disorder; schizophrenia; prostate disease; autoimmune disorder; AIDS.
                                                                                                                                                                                                                                                                                                                            An isolated polypeptide conserved in proteobacterial extracellular domains used in the treatment and prevention of bacterial infections

```
Gene No. 20. This sequence represents a human secreted protein, and is expressed ubiquitously, including T-cells and amygdala.

The DNA sequences of the invention and their corresponding secreted protein and their corresponding secreted polypeptides are useful for preventing, treating or ameliorating medical conditions, e.g. by protein or gene therapy. Also pathological conditions are diagnosed by determining the amount of the new polypeptides in a sample or by determining the presence of mutations in the DNA sequences. Specific uses are described for each of the DNA sequences and the encoded proteins, based on which tissues they are most highly expressed in, and include developing products for the diagnosis or treatment of cancer, tumours, neurological disorders, developmental abnormalities and foetal deficiencies, blood disorders, leukaemias, diseases of the immune system (including allergies or astham), hepatic diseases, autoimmune cognitive disorders, schizophrenia, prostate diseases, autoimmune disorders and AIDS. The polypeptides are also useful for identifying
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New isolated human genes - useful for diagnosis and treatment of, e.g. cancers, neurological disorders, immune diseases, developmental disorders or blood disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      sequence is encoded by a cDNA of the invention, designated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Score 37; DB 20; Length 23

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               (SENP: see AAI10068-AAI28459). The present sequence is a peptide encoded by one such probe. The SENPs are derived from human HeLa cells. The SENPs can be used to produce a single exon microarray, which can be used for measuring human gene expression in a sample derived from human cervical epithelial cells. By measuring gene expression, the probes are therefore useful in grading and/or staging of diseases of the cervix, notably
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wlpo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Peptide #6394 encoded by probe for measuring placental gene expression.
                                              Peptide #5868 encoded by probe for measuring cervical gene expression.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                               Probe; human; microarray; gene expression; cervical epithelial cell;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          nucleic acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

The present invention relates to single exon nucleic acid probes (SENP: see AA131315-AA157546). The present sequence is a peptide encoded by one such probe. The probes are useful for producing a microarray for predicting, measuring and displaying gene expression in samples derived from human placenta. The probes are useful for antenatal diagnosis of human genetic disorders.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Length
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 41, Application US/08050319B

Patent No. 5633145

GENERAL INFORMATION:
APPLICANT: M.Feldmann, P.W. Gray,
APPLICANT: M.J.C. Turner, F.M Brennan
TITLE OF INVENTION: Modified human TNFalpha (Tumor
TITLE OF INVENTION: Mecrosis Factor alpha) Receptor
NUMBER OF SEQUENCES: 57

CORRESPONDENCES: 57

CORRESPONDENCES: 75

CORRESPONDENCES: 67

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                       ; Search time 12.56 Seconds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Description
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Sequence

J. Biol. Chem. 268, 9381-9386, 1993
A; Title: Isolation and characterization of the chains of type V/type XI collagen present A; Reference number: A46662; MUID: 93252802
A; Status: preliminary
A; Molecule type: protein
A; Residues: 1-39 AMAY
A; Residues: 1-39 AMAY
A; Experimental source: vitreous humor
A; Note: sequence extracted from NCBI backbone (NCBIP:131547)
C; Superfamily: collagen alpha 1(I) chain; fibrillar collagen carboxyl-terminal homology;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C;Species: Oryctolagus cuniculus (domestic rabbit)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rasmussen A.S., Arrason U.;
"Phylogenetic studies of complete mitochondrial DNA molecules place cartilaginous fishes within the tree of bony fishes.";
U. Mol. Evol. 48:118-123(1999).
-!- FUNCTION: THIS IS ONE OF THE CHAINS OF THE NONENZYMATIC COMPONENT (CF(0) SUBUNIT) OF THE MITOCHONDRIAL ATPASE COMPLEX.
-!- SUBCELCULAR LOCATION: MEMBRANE-BOUND.
-!- SIMILARITY: BELONGS TO THE ATPASE PROTEIN 8 FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            MEDLINE-97386586; PubMed-9244435; Esposito T., Gianfrancesco F., Ciccodicola A., D'Esposito M., Nagaraja R., Mazzarella R., D'Urso M., Forabosco A.; Escape from x inactivation of two new genes associated with DXS6974E and DXS7020E.";
